                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               281
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    261
                                                                                                                     Submitted (28-JUN-2000) Plant Gene Expression Center, 800 Buchanan St., Albany, CA 94710, USA
On Feb 11, 2000 this sequence version replaced gi:6693723.
The sequence is of BAC F14D7 from Arabidopsis thallana chromosome
1. The sequence does not represent the sequence of the entire insert of this clone. It is shorter by 6954 by because we submit only the unique sequence of the clone. However, in order to facilitate the joining of overlapping clones in the future for creation of larger contigs, we provide small overlaps (200 bp) between overlapping sumbitted clones. The 5' end of this sequence overlaps by 200 bp to the 3' end of the sequence of the clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots; rosids; eurosids II; Brassicales; Brassicaceae; Arabidopsis. 1 (bases 1 to 81513)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                         Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-10-690-564-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel isolated lipid metabolism proteins (LMP) and encoding nucleic acids comprising a polymucleotide sequence encoding a polypeptide that functions as a modulator of seed storage compounds in a plant. The LMP nucleic acid is useful in producing transgenic plants with increased levels of seed storage compound, e.g. lipid, a fatty acid, a starch or a seed storage protein, as markers for specific regions of the genome and for evolutionary and protein structural studies. The present sequence represents an LMP nucleic acid of the invention.

This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up or down-regulated in transgenic plants overexpressing the heterodimeric E2Fa/DPa transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes generating transgenic plants for the production of growth regulators, enzymes, therapeutics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or biomass, enhanced survival capacity, stress tolerance, plant architecture or physiology, altered endoreduplication, biochemistry, signal transduction, storage lipid mobilisation and/or altered photosynthesis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US-10-690-564-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  each relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers during transformation of cells or tissues. The identified genes play a role in a variety of biological processes such as DNA replication, cell wall biosynthesis, nitrogen and/ or carbon metabolism or they function transcription factors. This polynucleotide sequence is thate cress cDNA repressed 1.3 fold or more in plants overexpressing the EZFA/DFA transcription factor, given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   954

WPI; 2004-667718/65

New recombinant nucleic acid molecules and polypeptides from Gossypium hirsutum, useful for producing plants with improved biological characteristics (e.g. improved plant cold or drought tolerance).

Claim 1; SEQ ID NO 4242; 14pp; English

the 58798 Cotton plant CDNA sequences mentioned in the specification.

C Also a recombinant polypeptide comprising any of the 58798 amino acid

C sequences mentioned in the specification and producing a plant having an

C improved property. Producing a plant having an improved property

C comprises transforming a plant with a recombinant construct comprising a

C promoter region functional in a plant cell operably joined to a

C promoter region functional in a plant cell operably joined to a

C polynuclectide comprising a coding sequence for a polypeptide associated

C polynuclectide comprising a coding sequence for a polypeptide associated

C plant cells by modification of the cell cycle pathway, improving plant

C plant cells by modification of the cell cycle pathway, improving

C plant tolerance, providing increased resistance to plant disease,

C producing galactomannan (or lignin or plant growth regulators), improving

C plant heat tolerance, improving plant tolerance to herbicides, increasing

C the rate of homologous recombination in plants, improving plant tolerance

C to extreme osmotic conditions or to pathogens or peste, improving yield

C and/or content, improving yield by modification of carbohydrate, nitrogen

C plant growth and development under at least one stress condition. The

C polynuclectide and polypeptide may also be used in recombinant DNA

C constructs, in physical arrays of molecules, as plant breeding markers,

C or in computer-based storage and analysis systems. The present sequence

C seqdata.uspto.gov/sequence.thml?Doc.10=20040181830. However only 6585

C polynuclectide sequence were available, the remaining 52213

C polynuclectides and all 58798 protein sequences were not present. invention relates to a recombinant polynucleotide comprising any of

Sequence 1184 BP; 375 A; 233 C; 281 G; 295 7; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       21
```

The present invention describes isolated polynucleotides (PN) comprising a sequence selected from one of 835 nucleotide sequences given in AAA67073 to AAA67907, their (reverse) complements, sequences given in Expectation (E) value of 0.01 or less compared to the 835 sequences, sequences at least 50% identical to them, 200, 100, 40 or 20-mers of the 835 sequences or sequences that are degenerately equivalent or allelic to the 835 sequences. The polynucleotides are used to modify the activity of a polypeptide involved in a polysaccharide biosynthetic pathway in the plant. They are especially used to modulate or alter the polysaccharide content, composition or structure of the plant. AAB16288 to AAB16340 are proteins encoded by some of the polynucleotide sequence given in the Claim 1; Page 48-49; 301pp; English New genes encoding proteins involved in a plant polysaccharide biosynthetic pathway, useful for modulating or altering the polysaccharide content, composition or structure of the plant. P-PSDB; AAB16294. present invention of to

The present invention describes isolated polynucleotides (PN) comprising a sequence selected from one of 835 nucleotide sequences given in AAA67073 to AAA67907, their (reverse) complements, sequences producing an Expectation (E) value of 0.01 or less compared to the 835 sequences, sequences at least 50% identical to them, 200, 100, 40 or 20-mers of the 835 sequences or sequences that are degenerately equivalent or allelic to the 835 sequences. The polynucleotides are used to modify the activity of a polypeptide involved in a polypaccharide biosynthetic pathway in the plant. They are especially used to modulate or alter the polypaccharide content, composition or structure of the plant. AAB16268 to AAB16340 are
                                                                                                                                                                                                                                                                                                                                            New genes encoding proteins involved in a plant polysaccharide biosynthetic pathway, useful for modulating or altering the polysaccharide content, composition or structure of the plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Eucalyptus grandis; pinus radiata; Monterey pine; modification; plant cell wall; polysaccharide; polysaccharide biosynthetic patransgenic plant; ds.

                                                                                                                                                           Percent Similarity:
                                                                                                                                                                                         Alignment
                                                                                                                                                                                                                               The present invention relates to coding sequences (see AAF4740-F44840 and AAF44843-F44844) and proteins (see AAB65714-B65814) involved in programmed cell death (PCD; appotosis). The coding sequences and proteins of the present invention are useful for modulating a PCD or cell death pathway and various developmental pathways in a forestry plant, by stably incorporating one of the present coding sequences into the genome of the forestry plant, where the coding sequence provides a PCD pathway that is not present in a native form of the forestry plant
                                                                                                                                                                                                                                                                                                                                                          Novel defender against cell death polynucleotide useful for modulating programmed cell death pathway and specific development pathways in

                                                                                                                                                                                                                                                                                                                            US-10-690-564-2 (1-317) x ADB94943
                                                                                                                                                                                                                                                                                                                                                                                                                        Alignment Scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes an isolated polynucleotide (I) comprising a nucleotide sequence that is one of 145 fully defined sequences of 221-3415 base pairs (bp), given in the specification, and/or its complements, reverse complements, reverse sequences, or sequences having 75, 90 or 95 sequence identity to or that hybridise under stringent hybridisation conditions to one of the 145 sequences. The methods and compositions of the present invention to do with (I) are useful for modulating programmed cell death and thereby altering the development cycle of plant cells, and altering plant development. This sequence encodes a protein associated with the programmed cell death pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polynucleotide useful for modulating programmed cell death, altering the development cycle of plant cells, and subsequently modifying plant development.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               nucleotide sequence that is one of 145 fully defined sequences of 221-3415 base pairs (bp), given in the specification, and/or its complements, reverse complements, reverse sequences, or sequences having 75, 90 or 95 $ sequence identity to or that hybridise under stringent hybridisation conditions to one of the 145 sequences. The methods and compositions of the present invention to do with (I) are useful for modulating programmed cell death and thereby altering the development cycle of plant cells, and altering plant development. This sequence encodes a protein associated with the programmed cell death pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated polynucleotide useful for modulating programmed cell death, altering the development cycle of plant cells, and subsequently modifying

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5
The present invention describes a method for identifying and validating plant genes/proteins as targets for agrochemicals comprising determining the gene or protein expression profiles of a plant and downregulating the expression of the gene or protein in the plant or plant cell. Also described: (1) methods for screening candidate agrochemical compounds, comprising the use of the above method or the use of any of the 785 fully defined nucleotide sequences (ADF37942 to ADF38726) or protein sequences, or their homologues, functional fragments or derivatives; (2) a method for producing an agrochemical resistant plant, comprising the use of the above-mentioned nucleotide or protein sequences; (3) an isolated nucleotic acid that is identified by any of the above methods or that comprises at least a part of a nucleic acid sequence chosen from any of the 785 culled that is identified by any of the above methods or that comprises at nucleotide sequences given in the specification; (4) a plant tolerant to an agrochemical, in which the expression level of one or more of the culled acid sequences given in the specification is modulated; and (5) a harvestable part of the plant described above. The method is useful in cidentifying and validating plant targets for agrochemicals or in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Identifying and validating plant genes or proteins as targets for agrochemicals, useful for producing agrochemical-resistant plants, comprises determining and down regulating the gene or protein expreprofiles of a plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Synchronised tobacco BY2 cDNA sequence SEQ ID NO:55

CC This invention relates to a novel method for altering one or more plant CC characteristics. Specifically, it refers to identifying genes that are up CC - or down-regulated in transgenic plants overexpressing the heterodimeric CC E2Fa/DPa transcription factor of Arabidoppis and using these sequences to CC generating transgenic plants for the production of growth regulators, CC enzymes, therapeutics, pharmaceuticals and animal feed products, where CC the altered plant characteristics are selected from increased yield or CC biomass, enhanced survival capacity, stress tolerance, plant architecture CC or physiology, altered endoreduplication, biochemistry, signal CC transduction, storage lipid mobilisation and/or altered photosynthesis, CC each relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers CC during transformation of cells or tissues. The identified genes play a cole in a variety of biological processes such as DNA replication, cell CC wall biosynthesis, nitrogen and/or carbon metabolism or they function as transcription factors. This polymucleotide sequence is thate cress cDNA repressed 1.3 fold or more in plants overexpressing the E2Fa/DPa transcription factor, given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        먉

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TITLE
                                                                                                                                                                                                                                                    Submitted (18 NOV-2003) Genoscope - Centre National de Sequencage :
BP 191 91006 EVRY cedex - FRANCE (B-mail : seqref@genoscope.cns.fr)
The sequences are based on single pass reads.
Life Technologies (a division of Invitrogen) members carried out full-length librairies construction : Temple G.
Genoscope members carried out sequencing and annotation : Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.
URGY INRA : Clepet C., Caboche M.
Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). S prime and 3 prime are assembled with Phrap.
